Data Analyst with 3+ years of experience in risk analytics and fraud detection across large-scale transaction systems. Proven track record building SQL/Python pipelines, statistical models, and monitoring frameworks to reduce risk exposure and support policy decisions

SKILLS

- **Languages**: Python, SQL (Advanced), C++, Pandas, NumPy, Scikit-Learn
- **Analytics & Statistics:** A/B Testing, Experiment Design, Hypothesis Testing, Regression, Time-Series Forecasting, Clustering, Segmentation, Anomaly Detection, Large-Scale Data Processing
- **Visualization:** Tableau, Power BI, Excel, Matplotlib, Seaborn
- **Data Engineering**: Apache Kafka, Apache Airflow, FastAPI, PostgreSQL, SQL Server

WORK EXPERIENCE

GOLDMAN SACHS |Risk Engineer – Risk Analytics & Reporting *Feb 2025 – Present*

- Designed and deployed production risk monitoring pipelines (Python, SQL, Airflow) over $750B+ in daily transaction data to detect anomalies, validate liquidity exposures, and surface emerging risk events in real time
- Built time-series forecasting & statistical models to predict liquidity behavior and support risk policy decisions, improving funding forecast accuracy by 25%+; performed hypothesis testing & backtesting against LCR, NSFR, and STWF regulatory frameworks
- Partnered cross-functionally with Treasury, Risk, and Engineering teams to translate data-driven analytics into production risk workflows; developed executive Tableau dashboards to monitor exposure trends

GOLDMAN SACHS |Summer Analyst – Risk Analytics & Reporting *Jun 2024 – Aug 2024*

- Developed & deployed a Python-based FR2052a Lookup Tool**,** reducing regulatory reference search time by 50% improving accuracy for 300+ users across five divisions, increasing operational efficiency by 30%

VERITAS TECHNOLOGIES LLC |Data Science Intern – Resource Optimization & Machine Learning *Aug 2022 – May 2023*

- Built predictive and statistical models on large-scale datasets to forecast utilization trends and surface optimization opportunities; delivered dashboards to engineering leadership enabling data-driven decisions across 2 product lines

PERSISTENT SYSTEMS | Data Analyst Intern – Fraud Analytics & Graph ML *Jun 2022 – Aug 2022*

- Engineered graph-based analytical models on large-scale transactional data to analyze & detect fraudulent behavior
- Applied Node2Vec & FastRP embeddings to identify suspicious network behavior, improving fraud classification accuracy by 88%
- Designed data validation & visualization pipelines to discover behavioral patterns & purpose risk mitigation strategies

ACADEMIC & LEADERSHIP EXPERIENCE

Lead Consultant - AI Fraud Intelligence Copilot | Tech stack: Python, OpenAI, SQL, FastAPI

- Built an LLM-assisted transaction risk classification system to detect suspicious payment activity using structured prompts and contextual transaction metadata. Designed a validation workflow and evaluation metrics to ensure model reliability
- Integrated hybrid rule-based + LLM decision framework to improve fraud signal precision by 18% over baseline heuristics
- Deployed via FastAPI with SQL-backed transaction ingestion pipeline for real-time scoring

Team Lead – Market Behavior Analytics Project | Tech stack: Python, Tableau, Scikit-Learn

- Managed an end-to-end "Customer Segmentation" initiative requiring data preprocessing & analytics
- Utilized Python & SQL for data processing, applied K-Means clustering to identify 5 distinct customer segments
- Achieved 95% accuracy in segment identification, guiding the development of targeted marketing strategies

Fraud Analyst – Fraud Early Warning System | Tech stack: Python, XGBoost, FastAPI

- Engineered a risk scoring pipeline to detect friendly fraud in subscription payments by profiling customer dispute behavior — flagging high-risk refund requests before approval, reducing simulated chargeback exposure by 23%
- Built end-to-end: feature engineering on dispute/transaction history → XGBoost classifier → FastAPI scoring endpoint → analyst review dashboard with risk-tier badges

EDUCATION

Master of Science in Management Information Systems (MIS) | University of Arizona |GPA – 3.8/4 *Aug 2023 – Dec 2024*

Business Intelligence & Analytics Concentration

(Relevant Coursework: Enterprise Data Management, Business Consulting, Data Analytics, Applied Statistics, Business Intelligence)

Bachelor of Technology in Information Technology & Engineering | Pune University | CGPA – 3.9/4 *Aug 2019 – May 2023*

Honors in Machine Learning & Artificial Intelligence: Passed with grade *A*

(Relevant Coursework: Data Structures, Data Science & Big Data Analytics, Machine Learning, Cloud Computing)

EXTRA-CURRICULAR INTERESTS

- Intra -Mural basketball & badminton winner | Director of Sports MIS graduate association | Sub 4 – Hour marathoner
