PRANIT PATIL

Salt Lake City, Utah | patilpranit83@outlook.com | (+1) 6025660697 | LinkedIn | Portfolio | GitHub

Quantitative Engineering & Analytics professional with experience building scalable production pipelines, data models and applied AI workflows, delivering end-to-end data infrastructure that drives analytics, regulatory reporting and strategic decision making

SKILLS

- **Languages & Frameworks**: Python, SQL (Advanced), C++, Pandas, NumPy, Scikit-Learn
- **Analytics & Statistics:** A/B Testing, Hypothesis Testing, Regression, Anomaly Detection
- **Cloud & Infrastructure:** AWS (S3, EC2, Glue, Lambda), Azure (Data Factory, Synapse)
- **Machine Learning:** XGBoost, Random Forest, Logistic Regression, Time-Series Forecasting, Graph ML, MLflow
- **AI Tools:** Claude Code, GitHub Copilot, Cursor, Codex
- **Data Engineering**: Databricks, dbt, Snowflake, Apache Airflow, Apache Kafka, ETL Pipeline Design, CI/CD, Docker, Kubernetes

WORK EXPERIENCE

GOLDMAN SACHS |Quantitative Strategist – Core Strats (Liquidity Risk) *Feb 2025 – Present*

- Designed and executed statistical experiments (hypothesis testing, backtesting, confidence intervals) across regulatory frameworks to validate model assumptions and quantify metrics impact to help with funding strategy for the firms **$500bn+** debt portfolio
- Built executive Tableau dashboards synthesizing liquidity exposure trends across asset classes; partnered cross-functionally with Treasury, Risk, and Engineering leadership to crystallize analytical findings into actionable risk policies and timely funding decisions
- Developed time-series forecasting models to predict short-term liquidity behavior, improving funding forecast accuracy by **25% over** prior heuristic baselines; provided strategic recommendations to aide better funding decisions across the firm

GOLDMAN SACHS |Summer Analyst - Core Strats (Liquidity Risk) *Jun 2024 – Aug 2024*

- Developed & deployed a Python-based FR2052a Lookup Tool**,** reducing regulatory reference search time by **50%** improving accuracy for **300+ users** across five divisions, increasing operational efficiency by **30%**

VERITAS TECHNOLOGIES LLC |Data Science Intern – Resource Optimization & Machine Learning *Aug 2022 – May 2023*

- Built predictive and statistical models on large-scale datasets to forecast utilization trends and surface optimization opportunities; delivered dashboards to engineering leadership enabling data-driven decisions across 2 product lines

PERSISTENT SYSTEMS |Data Analyst Intern – Fraud Analytics & Graph ML *Jun 2022 – Aug 2022*

- Engineered graph-based analytical models on large-scale transactional data to analyze & detect fraudulent behavior
- Applied Node2Vec & FastRP embeddings to identify suspicious network behavior, improving fraud classification accuracy to **88%**
- Designed data validation & visualization pipelines to discover behavioral patterns & purpose risk mitigation strategies

PROJECTS

PERSONAL PROJECT | Product Analytics Engineer *Jun 2022 – Aug 2022*

- Analyzed **20M+** e-commerce events across a 5-stage conversion funnel using SQL window functions, CTEs, and complex data segmentation — dissecting user journeys by device, traffic source, to identify high-impact drop-off points driving platform adoption
- Trained an XGBoost conversion propensity model **(AUC-ROC 0.87)** with SHAP explainability to quantify feature importance driving purchase completion; used insights to formulate experimentation hypotheses for product and marketing stakeholders
- Built an interactive Streamlit dashboard with funnel visualizations, drop-off heatmaps, built-in A/B test calculator with statistical significance testing, and cohort retention curves — enabling cross-functional teams to prioritize and design growth experiments

PERSONAL PROJECT | Fraud Analyst – Fraud Early Warning System *Jun 2022 – Aug 2022*

- Engineered a risk scoring pipeline profiling customer dispute behavior to detect friendly fraud in subscription payments; designed A/B test framework comparing model-flagged vs. control cohorts, reducing simulated chargeback exposure by **23%**
- Built end-to-end: feature engineering on transaction history → XGBoost classifier → analyst review dashboard with risk-tier badges
- Deployed the classifier behind FastAPI scoring endpoint with SQL backed ingestion, returning a risk tier at request time

EDUCATION

Master of Science in Management Information Systems (MIS) | University of Arizona |GPA – 3.8/4 *Aug 2023 – Dec 2024*

Business Intelligence & Analytics Concentration

(Relevant Coursework: Enterprise Data Management, Business Consulting, Data Analytics, Applied Statistics, Business Intelligence)

Bachelor of Technology in Information Technology & Engineering | Pune University | GPA – 3.9/4 *Aug 2019 – May 2023*

***Honors in Machine Learning & Artificial Intelligence: Passed with grade** A*

(Relevant Coursework: Data Structures, Data Science & Big Data Analytics, Machine Learning, Cloud Computing)

EXTRA-CURRICULAR INTERESTS

- Intra -Mural basketball & badminton winner | Director of Sports MIS graduate association | Sub 4 – Hour marathoner
